DKC MARBLE

DKC marble products are extracted from the marble quarries in Turkey, processed by professionals in the production facilities and presented to the customers.

Marble industry in Turkey. According to MTA reports, Turkey has 40% of the world's marble potential with 5 billion m³ of marble reserves (visible + probable + possible). There are approximately 800 quarries, 1500 factories and 7000 workshops operating in the sector in Turkey.

Today, the usage area of the natural stones used in coating, flooring and decoration rather than the building stone changes according to the characteristics of the natural stones, for example granite is used in the coating of external structures and flooring, while marble is mostly used in the construction sector, interior spaces and fine arts, decoration, highway, concrete, asphalt and topcoat filling material. It is also used as a feed and fertilizer additive in the chemical industry.

We provide you with the best quality marble you need with our professional mining engineer team. The final mass production is started.

DKC Marble is a trademark of DKC Foreign Trade Incorporation

that is the authorized company for oversea sales and has power license for dealers.

About Products

Marbles are one of the products that we often encounter in daily life and that many of us know. They generally have white and red colors. However, with the intervention of some foreign substances over time, it has also taken shape over different colors. When the marbles are examined with a microscope, it is seen that they are formed from calcite crystals that are strongly interlocked with each other. When we look at the composition, it is known that it consists of 90-98% CaCO₃. It also contains magnesium carbonate.

Marbles are used in many areas due to their properties. The properties of marbles are as follows:

Particle size, hardness and color distribution of marbles vary. Therefore, it has a heterogeneous structure.

It is one of the stones that completes its formation in a long time. This feature causes the marble stone to be strong and healthy, as the formation is fully completed and the pores are filled with the rich components that make up the stone.

- It is very easy to process marbles according to their intended use.

- Provides high resistance against external factors when there is no strong impact. It resists water and freezing in winter.

- Its most important feature is its longevity.

- It is used in decorative works because it is naturally in different colors and patterns. It contains different minerals. The degree of hardness can be determined according to these minerals.

Marbles are used in many places with their feature and durable structure. It is especially used in decoration due to its color and vivid appearance. Marbles used in building entrances, stair heads and inside apartments are also used in corporate buildings to obtain a beautiful appearance. Apart from these, marbles are also used in the manufacturing phase. Marbles, which are used in the internal structure of products that give excessive heat, are also used in products that need to protect the cooling effect.
